

## Energetic boundary and cleansing of technical vibrations

Matter is compressed energy and therefore the cell of the body is "compressed energy". Even if it might sound strange, this is exactly the reason why energy medicine is so successful. However, there are not only positive vibrations, but also burdening ones, for example, from technical appliances. If, for instance, the frequency of a mobile phone keeps hitting your physical body, the originally positive natural frequency of the body is shifted negatively. This opens the door for physical disorders or even illnesses. However, we do not want to evoke fear, but only cause thinking and inform.

It is hard, or almost impossible, to protect your child from radiation in everyday life. For example as soon as the child is born it undergoes examinations with technical devices, producing radiation in hospital. The list goes on with mobile phones, microwaves, computers, TV and infrared remote controls. This makes up an enormous amount of burdening energies.

(Highly)sensitive children perceive these energies consciously, or unconsciously. Their energy body is more subtle and sensitive than an adult's one. Therefore, you should think of an energetic cleansing with the help of the **Angel Aura Essence "Angel Sonael"**, every now and then. Children, who are permanently exposed to radiation, can even use the spray on a regular basis. It is best your child decides when, and how often, it wants to use the Aura Essence.

### A PRACTICAL EXAMPLE

***Situation:** Antonia (aged 35) is seven months pregnant. When she goes to bed, she feels the baby moving very strongly, which she thoroughly enjoys. But she notices that the unborn child reacts in panic during an ultra-scan. A midwife recommends her to use the Angel Aura Essence "Angel Sonael", a few days before the check. The extreme movements during the radiation exposure are no longer.*

***Explanation:** The Angel Aura Essence "Angel Sonael" strengthens people's subtle body (aura, chakras) and protects from subtle energies of technical and other radiation. However, this remains scientifically unproven.*
